Professional Summary

Software Development Engineer with experience building highly scalable, distributed microservices and event-driven platforms for Payments and Lending fintech startups. Handled millions of monthly transactions, improving system performance, driving significant cost optimizations, and building compliant, audit-ready software.

Education

Integrated Master of Technology (iM.Tech.) | ***Computer Science and Engineering*** August 2018 – July 2023
International Institute of Information Technology, Bangalore Bengaluru, India

Experience & Projects

Software Development Engineer - L4 | ***Autopay, Checkout & Payments*** | ***CRED*** January 2026 – Present
- Led cost optimization across the CRED Payments charter & reduced **$114,000** annually in tech costs through measures like Graviton migration, ALB aggregation, right-sizing compute, Spot instance utilization.
- Scaled Autopay Platform to process **$21M/month TPV** across **100K daily transactions**. Onboarded multiple businesses and accelerated time to onboard from multiple sprints to hours through tech automations.
- Migrated from in-memory orchestrators to Temporal for durable workflows and established L0-L2 telemetry, thereby **minimising daily payment drops by 58%** and slashed incident MTTD by 6 hours.
- Designed and built the affordability stack, enabling CRED users to purchase high-value products through flexible monthly installments; developed the pricing and rules engine powering these financing flows.
- Serve as the primary owner for the Autopay pod, Pricing pod, guiding design decisions, mentoring developers, and manage core infra for more than 10 business lines like Credit Cards, Utility Payments, SIPs.

Software Development Engineer - 2 | ***Debt Management & Lending*** | ***Navi*** July 2024 – December 2025
- Designed an intelligent case-prioritization platform analyzing behavioral and risk signals, boosting debt collection efficiency by **60 bps** and cutting agent onboarding time from 2 weeks to 1 week.
- Developed a vendor-agnostic telephony and call-recording platform optimized for low-bandwidth regions, supporting 2,000+ field agents; scaled the system to process **1.5M monthly calls** with **97% recording coverage**.
- Performed an RBI-compliant multi-tenant architecture migration across the debt-management stack, implementing strict data isolation across OLTP/OLAP stores for new lending streams (Credit on UPI).
- Engineered a GenAI voice-bot orchestrator executing **100K+ daily calls** via real-time signals, saving **$72,000 annually** and offsetting over **12,000 monthly man-hours**.

Software Development Engineer - 1 | ***Debt Management*** | ***Navi*** July 2023 – June 2024
- Built an end-to-end allocation engine using Linear Programming (LPP) models on Databricks to optimize case distribution, driving recovery of **100+ crores INR monthly**.
- Developed a highly available search platform with custom shard routing and fuzzy search, **reducing latency by 72%** (250ms to 70ms) and streamlining agent operations from 3 clicks to 1.
- Optimized Kafka ingestion pipelines using Kotlin coroutines and partition-level parallelism, achieving a **4x increase** in write throughput and trimming annual infrastructure costs.

Achievements

- **Game Changer** - Navi, JFM '25 - awarded for high-impact contributions enabling Debt Collections via AI voice bots.
- **Spearhead** - Navi, May '24 - awarded for building a robust tele-calling case allocation layer; fast-tracked promotion to SDE-2.

Skills

Programming Languages: Java, Kotlin, Python

Databases & Tools: Elasticsearch, PostgreSQL, DynamoDB, ScyllaDB, Redis, Kafka, Jenkins, AWS, GCP, Grafana, New Relic, Github Actions, Docker, Kubernetes, Temporal, Airflow, jOOQ, Flyway, Springboot, Spock

Community Involvement

Co-Licensee, TEDxIIITBangalore 2019 – 2021
- Organised the first virtual edition of TEDxIIITBangalore which gained over **75k views** on Youtube.
- Managed a team of 20 and looked into event budgeting, resource allocation, sponsorships and key vendor partnerships.
